SECUNORM 590

NO. 590001

SUCCESSFULLY TESTED BY
EXXONMOBIL IN GERMANY!

18% of original size

Extra long handle

With the exact length of 100 cm it is guaranteed that you can always cut from a safe distance - without having to place your arm or head in the danger zone below the big bag. The eyelet can be used to fasten the knife.

Dirt resistant

Very few people work in a sterile environment. No problem for the SECUNORM 590. For example, the exchangeable dirt control device ensures that less dust and other foreign objects get into the cutting head.

Robust construction

The middle element is made of stainless steel; all other components are made of a particularly hard plastic. Protection caps on the cutting head and stainless secured screws also contribute to durability and high weather resistance.

Left and right handed

With the left hand or the right? Actually with both! You will need both hands to use the SECUNORM 590. Decide for yourself which hand to use to turn the blade-engaging element, and which hand to use for stabilising. A comfortable grip is the goal.

To cut like new again

Your cutting tool will be exposed to extreme stress. It is, therefore, all the better that you can easily replace the key components. For example, the complete cutting head. Or just a part of it, such as the stainless steel blade or the dirt control device.

A small step to achieve great things.

Flexible big bags are increasingly used in various types of industries. Despite the many advantages, there is one main problem when working with flexible big bags: how cut open those heavy-weight bags without the contents spilling over you? The solution is... by using this innovation from MARTOR. The SECUNORM 590 is specifically designed for cutting big bags. Additionally, it has various thought-through features, such as the extra-long handle and the automatic blade retraction. To help you work safely.

PRODUCT FEATURES

Technical features

	High safety		Blade change with tool
	Abrasion resistant		Ergonomic
	Extended blade length		Cutting depth
	Lanyard hole		For right and left hander
	Heavy-duty		Non-corrosive

Application

Safety technology

Automatic blade retraction – a high degree of safety

The SECUNORM 590 features automatic blade retraction. As soon as you move back the blade engaging element to the initial position, the blade will retract into the cutting head. And stay there. Giving you a high level of safety from cut injury.

YOU CAN FEEL THE QUALITY.

SECUNORM 590
